Health psychologists have essential expertise on the main mitigation and prevention strategies for COVID-19, as many of these strategies are behavioral.

ESSENTIAL EXPERTISE

Infectious diseases have long-term health consequences. The continued involvement of health psychologists on the long-term sequelae of COVID-19 will be an important area of future research.

POTENTIAL LONG-TERM SEQUELAE

We must increase the visibility of health psychologists as experts with specialized knowledge in these areas.

INCREASE VISIBILITY

In the future, we must encourage and support health psychologists to engage in a meaningful way with infectious diseases.

ENCOURAGE AND SUPPORT
